SUMMARY

Detail-oriented Backend Engineer and Engineering Lead with over 7 years of experience in developing and operating large-scale payment platforms at Rakuten Group. Proven track record in managing the full software development lifecycle (SDLC), from architectural design to release and operation. Expertise in Java/Spring Boot and Azure-based Kubernetes (AKS) environments, with a strong focus on high-availability, security (PCI DSS), and BCP/DR strategy. Bilingual professional experienced in facilitating technical collaboration across global teams.

EXPERIENCE

Rakuten Group — Rakuten Pay Online (RPAY) Team | April 2020 – September 2026
Engineering Lead (2023 – 2026)

- **Fraud Detection System:** Designed and integrated a real-time fraud detection system utilizing Azure Service Bus for asynchronous data feedback and comprehensive monitoring.
- **National Tax & Regulatory Compliance (2023):** Led the technical integration of non-credit card payment methods, including complex modifications to bank transfer cycles and new routing implementations to meet national tax requirements.
- **Global Expansion:** Led the technical integration for international merchants, including requirement analysis, security requirement alignment, and the development of multi-currency invoice formats.
- **Workflow Automation:** Implemented Argo Workflows to streamline batch job management and job-net orchestration, significantly improving operational efficiency.
- **Security & Compliance:** Championed PCIDSS compliance, including the implementation of integrity monitoring to detect content tampering.
- **Technical Mentorship:** Mentored junior engineers and facilitated organization-wide knowledge sharing regarding emerging technologies and external service updates.

Backend Engineer (2020 – 2023)

- **System Reliability & BCP:** Designed and deployed a standby environment in West Japan on Azure, ensuring business continuity with a 6-hour recovery time objective (RTO).
- **Infrastructure & Security:** Successfully implemented Web Application Firewall (WAF) on Azure Application Gateway for live systems while minimizing false positives.
- **Performance Optimization:** Developed an internal order-search application, optimizing database indexing to handle increased transaction volumes without performance degradation.
- **Operational Excellence:** Served in the operations team to build monitoring dashboards, improve security posture, and standardize operational manuals. Developing a batch to reduce the cost of operation.
- **System Scale:** Maintained a high-traffic platform (API: 45 QPS Avg/90 QPS Spike; Web: 30 QPS Avg/60 QPS Spike).

EDUCATION

Tokyo institute of technology
Master of Computer Science, *2022*

CERTIFICATIONS

- AZ-104 Azure Administrator Associate
- AZ-305 Azure Solutions Architect Expert
- Certified Kubernetes Application Developer
- Applied Information Technology Engineer Examination

PROJECT HIGHLIGHTS

- **Multi-Region Failover Architecture:** Designed and implemented a multi-region strategy using AKS to ensure high availability and disaster recovery.
- **Regulatory Compliance:** Successfully led the implementation of new tax calculation methods and non-credit card payment methods (e.g., bank transfer integration) to comply with national regulations.

- **Subscription & Fraud Systems:** Implemented comprehensive subscription search features, fraud detection systems, and email marketing integration.

LANGUAGE

- **Japanese : Native level**
- **English : Business level**

TECHNICAL SKILLS

- **Programming Languages:** Java (21, 25)
- **Frameworks:** Spring Boot (3.x–4.x)
- **Infrastructure:** Azure, Kubernetes (AKS)
- **CI/CD:** GitHub, GitHub Actions, ArgoCD, Argo Workflows, SonarQube
- **Databases:** Microsoft SQL Server
- **Testing & AI Tools:** Gatling (Load Testing), Karete (E2E testing), Claude Code, Codex
- **Documentation & PM:** Jira, Confluence
